Subject: Monthly Progress Report, T-4713-B

This is the twenty-first report on project EREP 108, which covers the month of March 1975.

Heading data from the S-191 was discovered missing and not observed by the spacecraft. All the available information suggests that the other instructions for the S-191 observations were properly performed, and the information is probably acceptable. Reading the S-191 data tapes on the NOAA computer has lead to several minor problems, but the programming effort is proceeding well. Receipt of the S-190 A data is acknowledged.

Due to the late receipt of data, it is not reasonable to hope to successfully fulfill the goals of this investigation before January 1976. It is therefore requested that a six month no-cost extension be granted so that a significant scientific analysis can be accomplished.

Recipients of the financial report are marked by an asterisk on the attached distribution list.
